Job Title: Alzheimer's and prion diseases – Postdoctoral Research Fellow

Employer: Tanz Centre for Research in Neurodegenerative Diseases,
University of Toronto

Location: Krembil Discovery Centre,
60 Leonard Ave, Toronto, Ontario, M5T 0S8, Canada

Description:

We are an internationally-recognized team studying Alzheimer's disease, Tauopathies and Prion disorders. Our research builds on the hypothesis that the most promising early diagnostics and disease intervention strategies will emerge from an in-depth understanding of disease etiologies.

The group has access to state-of-the-art equipment and is embedded in a highly stimulating research environment at the Tanz Centre for Research in Neurodegenerative Diseases.

The group has an opening for a Postdoctoral Research Fellow. As the successful candidate you will contribute to both basic discovery research and a pre-clinical translational research program.

Applicants with a PhD in biochemistry, pharmacology, biology or related disciplines are preferred. The ideal candidate has extensive experience with techniques used to decipher the cell biology and protein biology of neurodegenerative diseases. Some experience in pharmacology and medicinal chemistry are a plus.

If you are detail-oriented, possess problem solving skills and are a good communicator who enjoys working in a team, this position offers outstanding opportunities for further career development.

Interested candidates please send cover letter, statement of purpose, curriculum vitae and list of three references to:
